Project Proposal

Project Name: Fashion House Management System

Team Members:

1. S.M. Haser Hindhol – 1611927042
2. Jannatun Naima Shorno – 1620680042

Project Details:

In a fashion house, there are lots of ways that it can be automated. We already see it in different kinds of brand shops. The goal of our project is to make such a program so that it is capable of managing an entire store.

Our program will include mostly all the basic needs of a fashion house. From selling products to managing the inventory, it can serve most of the basic purposes very easily and swiftly. The functions of this program will be as follows:

1. To manipulate products and keeping a database.
2. Selling available products
3. Inventory management

User can select among these three options and complete their desired tasks at their will.

To make this entire program, we are going to use multiple if-else statements, loops, string, different types of functions for different options and files to keep the database.
